Humanities

How have boats changed over time?

In today's lesson we will continue looking at how boats have changed over time.

Different type of boats

Today boats come in all shapes and sizes. As well as speedboats, motorboats, cruise liners, container ships and solar-powered boats, there are also modern canoes, rowing boats and sailing boats.

All of these boats can be grouped into four main categories. These are based on the type of power needed to move them through the water.

Use the information from your last Humanities lesson to identify which boats are powered by humans using oars, by wind using a sail, by engines using coal or diesel or by the sun using solar power.

canoe	speedboat	rowing boat	sailing boat
cruise ship	container ship	solar-powered boat	

<p>Powered by Humans</p>	<p>Powered by Wind</p>
<p>Powered by Engines</p>	<p>Powered by the Sun</p>

Computing

Today when you log on to your DB you will see Picking up Skills 3.

You will be asked to complete an algorithm to help collect the treasure and make it safely to the chest.
